

# ANALYSIS TEMPLATE FOR NINA

Jens Åström 2026-02-10

## Header 1

This is not an official NINA product meant for publication. It is just an informal quarto analysis template that conforms somewhat to the NINA graphical profile.

## Header 2

---

Quarto enables you to weave together content and executable code into a finished document. To learn more about Quarto see <https://quarto.org>.

### Header 3

---

When you click the **Render** button a document will be generated that includes both content and the output of embedded code. You can embed code like this:

```
my_result_1 <- 1 + 1
```

You can add options to executable code like this

The `echo: false` option disables the printing of code (only output is displayed), but you can still access the values like this: 4.

New pages can be forced by adding a `clearpage` command.

# NINA - figures

You can use the package `NinaR` to access the official nina colors.
